

Quality Assurance Automation Engineer Take Home Test

Thank you so much for your interest in Komi! We are really looking forward to getting to know you better. Interviewing is always a time commitment and we appreciate the time you have given to us so far.

Please read the instructions carefully, complete the assessment and submit it to us within 2 days. There are two tasks, on the second task you can use any automation tool you choose however, we use Cypress here at Komi so this would be our preference. Please feel free to reach out to us if you require clarification or have any questions regarding these tasks.

Task 1:

Load the [Komi](#) talent profile page.

1. Perform an exploratory test on the talent profile page, record/report the activity in a form of your choice that includes an overview of your approach
2. From the above exercise, prioritize your tests with reasons.

Task 2:

Load the [Komi](#) talent profile page.

Create a user journey test using any specific language and tools of your preference to validate the following:

- User checks if all the thumbnail images are loaded and visible
- Clicking on the section title at the top takes you to the right module
- User clicks on the side navigation arrow on the "Music Tracks" module and validates the paging and data.
- User clicks on "Pre-Save" button and validates the button changes to "Pre-saved"
- User clicks on a Youtube video and asserts that it redirects successfully
- Clicks on the "More" button in the "Single Music" module: validates and redirects to all relevant links.
- User clicks on a "Subscription" module and fills the form successfully.

Please push your code to a VCS of your choice (BitBucket, GitHub, etc.) with small commits and clear commit messages. Also justify your choice of tools.
